## In the claims

The following amendments are made with respect to the claims in the International application PCT/GB2004/003219.

This listing of claims will replace all prior versions and listings of claims in this application.

- 1 (original). A laser-markable composition which comprises a pigment, a solvent and a conductive polymer that absorbs IR radiation.
- 2 (currently amended). [[A]] <u>The</u> composition according to claim 1, which additionally comprises a binder having a labile group.
- 3 (currently amended). [[A]] The composition according to claim 1 or claim 2, wherein the pigment comprises an multivalent metal that undergoes a colour change due to a change in oxidation state, on irradiation.
- 4 (currently amended). [[A]] The composition according to any preceding claim  $\underline{3}$ , wherein the metal oxyanion is an octamolybdate.
- 5 (currently amended). [[A]]  $\underline{\text{The}}$  composition according to any preceding claim  $\underline{1}$ , which additionally comprises a colour-former.
- 6 (currently amended). [[A]] <u>The</u> composition according to claim 5, which comprises a substantially colourless electron-donating dye precursor.
- 7 (original). A method for providing an image on a substrate, which comprises applying to the substrate a pigment and a conductive polymer that absorbs IR radiation, followed by irradiation.
- 8 (currently amended). [[A]] The method according to claim 7, wherein the irradiation is by means of a laser emitting light at a wavelength of 800-1500 nm.
